

# U18ITI7202-Cloud Computing

## Lab Exercise – 1

Name : T Dinesh kumar

Roll no : 23BIT023

### Configuring openstack cloud

Aim :

To install and configure openstack.

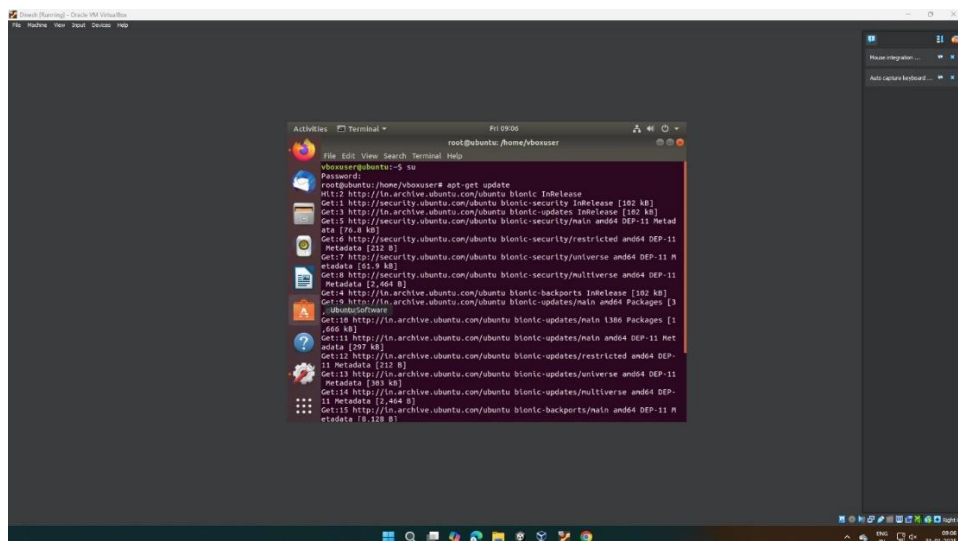

Procedure:

Setting Up OpenStack

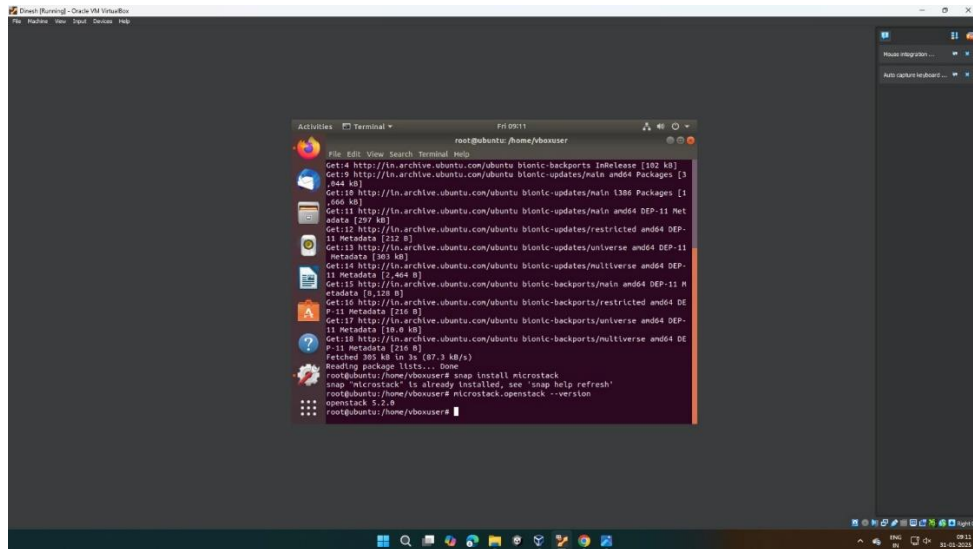

1. Open VirtualBox and start the virtual machine.

2. Open the terminal.
3. Ensure the system is up to date by running:  
`sudo apt-get update`

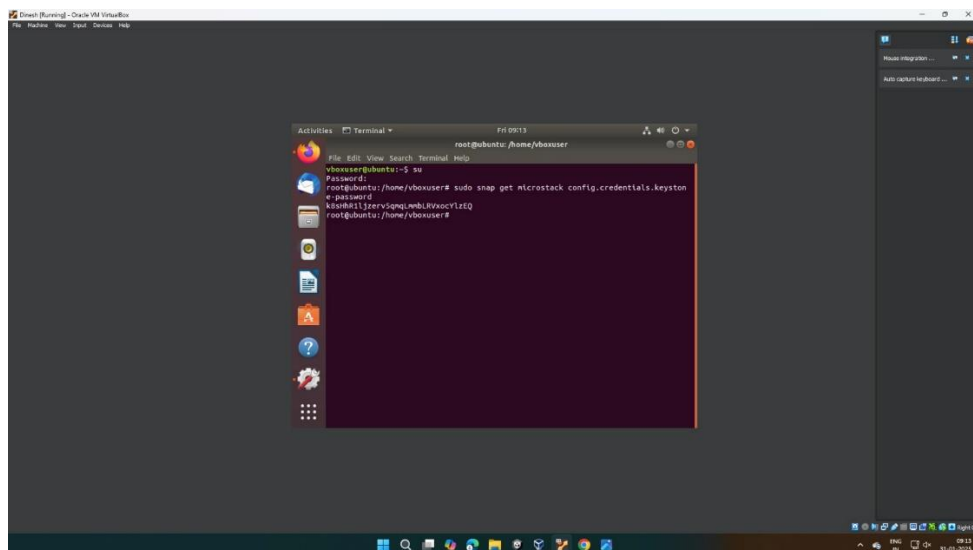

4. Initialize MicroStack and configure it as a control node:  
`sudo microstack init --auto --control`
5. Verify the installation by checking the OpenStack version:  
`microstack.openstack --version`

```
root@ubuntu:/home/vboxuser# sudo microstack init --auto --control
Get:4 http://in.archive.ubuntu.com/ubuntu bionic-backports InRelease [102 kB]
Get:19 http://in.archive.ubuntu.com/ubuntu bionic-updates/main amd64 Packages [3,844 kB]
Get:18 http://in.archive.ubuntu.com/ubuntu bionic-updates/main amd64 DEP-11 Metadata [204 kB]
Get:11 http://in.archive.ubuntu.com/ubuntu bionic-updates/main amd64 DEP-11 Metadata [391 kB]
Get:12 http://in.archive.ubuntu.com/ubuntu bionic-updates/restricted amd64 DEP-11 Metadata [212 B]
Get:13 http://in.archive.ubuntu.com/ubuntu bionic-updates/universe amd64 DEP-11 Metadata [2,464 B]
Get:14 http://in.archive.ubuntu.com/ubuntu bionic-updates/multiverse amd64 DEP-11 Metadata [2,464 B]
Get:15 http://in.archive.ubuntu.com/ubuntu bionic-backports/main amd64 DEP-11 Metadata [8,128 B]
Get:16 http://in.archive.ubuntu.com/ubuntu bionic-backports/restricted amd64 DEP-11 Metadata [216 B]
Get:17 http://in.archive.ubuntu.com/ubuntu bionic-backports/universe amd64 DEP-11 Metadata [18.9 kB]
Get:18 http://in.archive.ubuntu.com/ubuntu bionic-backports/multiverse amd64 DEP-11 Metadata [216 B]
Fetched 385 kB in 3s (87.3 kB/s)
Reading package lists... Done
root@ubuntu:/home/vboxuser# snap install microstack
snap 'microstack' is already installed, see 'snap help refresh'
root@ubuntu:/home/vboxuser# microstack.openstack --version
:::
openstack 5.2.8
:::
```

## Logging into OpenStack

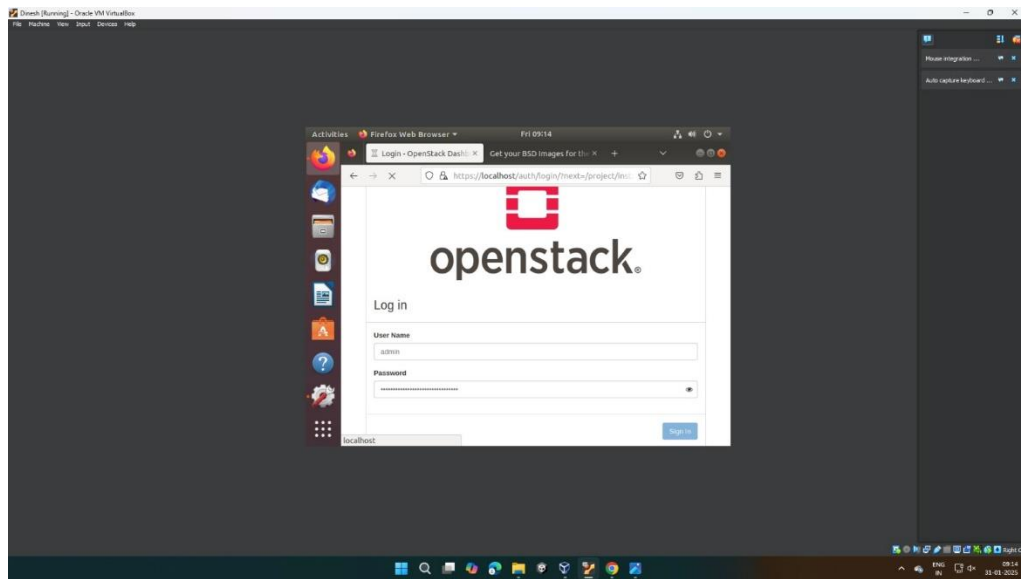

6. Retrieve the OpenStack login credentials:  
`sudo snap get microstack config.credentials.keystone-password`
  - Note the password. The default username is admin.

```
vboxuser@ubuntu:~$ su
Password:
root@ubuntu:/home/vboxuser# sudo snap get microstack config.credentials.keyston
e-password
kiorh41jervvqngwmbLkVxocYlZlQ
root@ubuntu:/home/vboxuser#
```

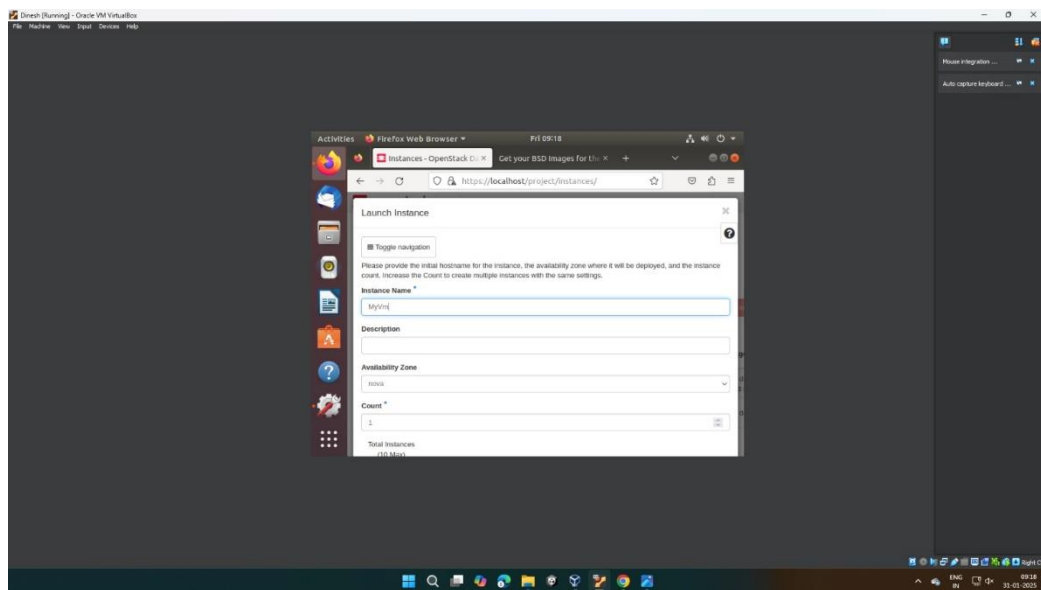

7. Open a web browser (Firefox) and go to:
  - <http://localhost> or <http://10.20.20.1>

8. Log in using the retrieved credentials.

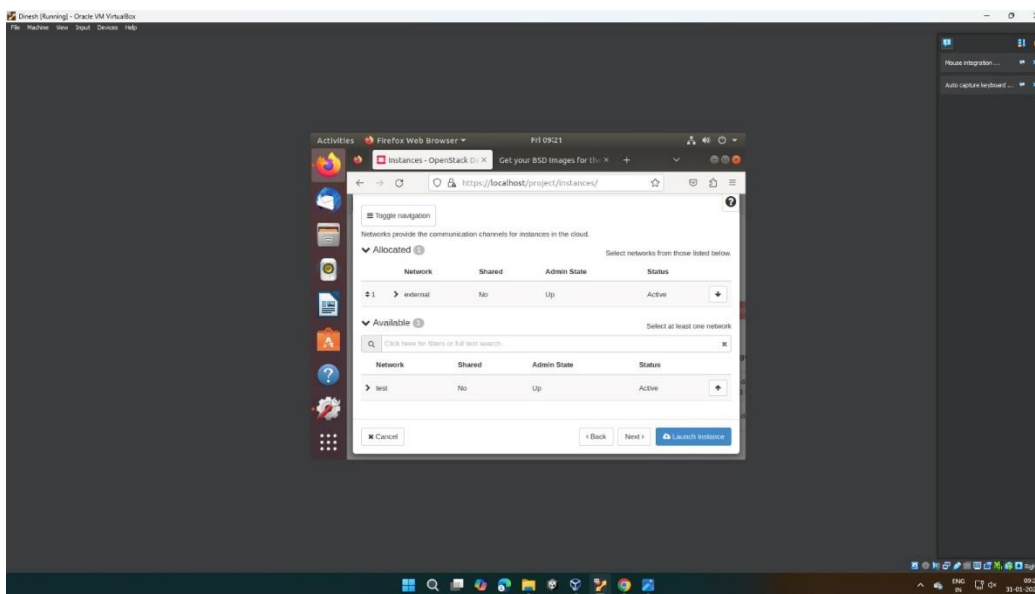

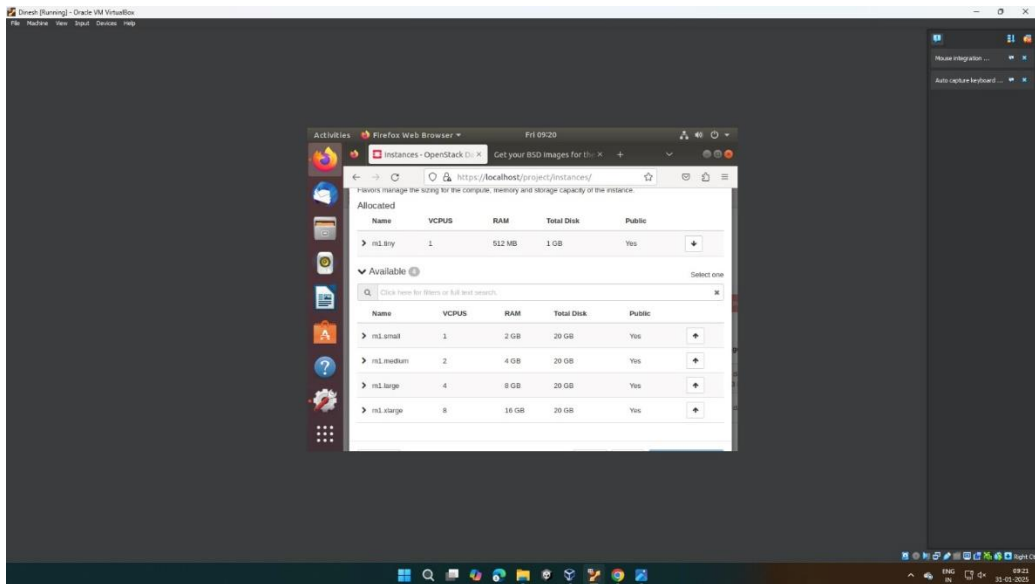

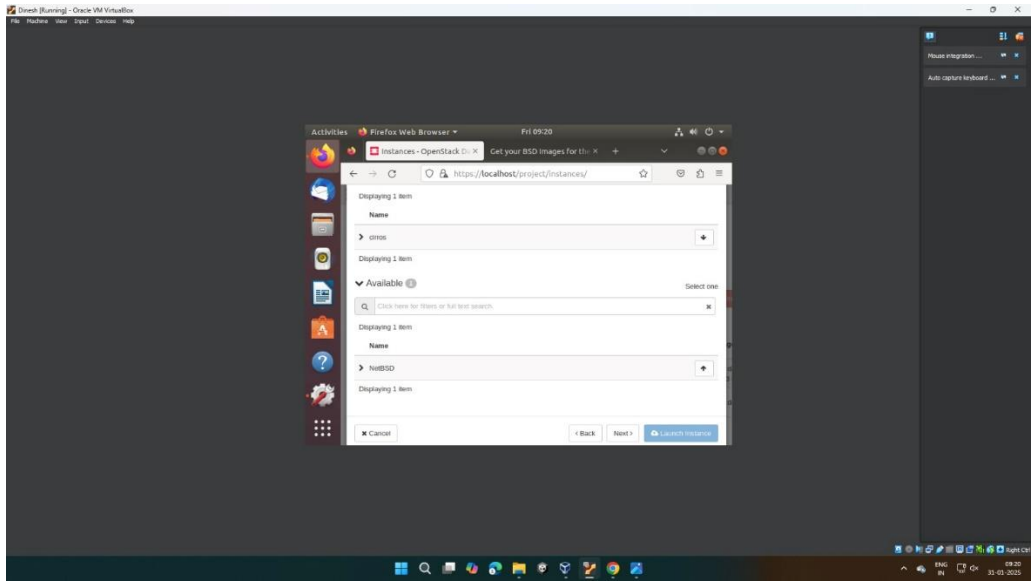

### Launching an Instance in OpenStack

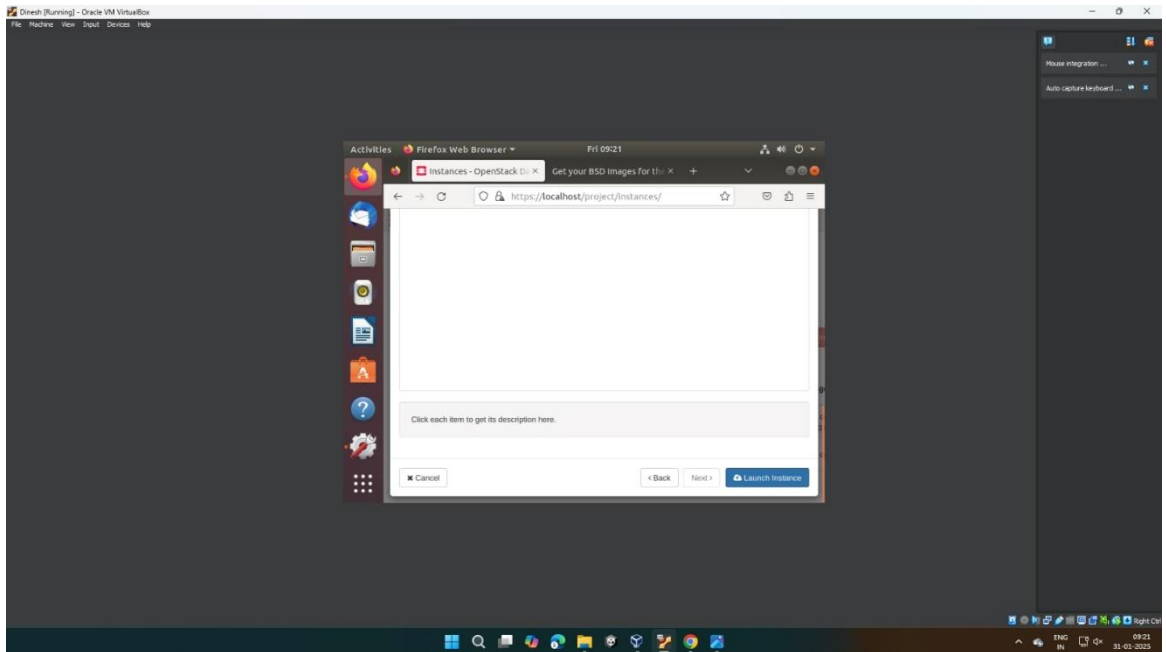

9. Navigate to the Instances page from the OpenStack dashboard.
10. Click on Create Instance and provide a name, MyVm.

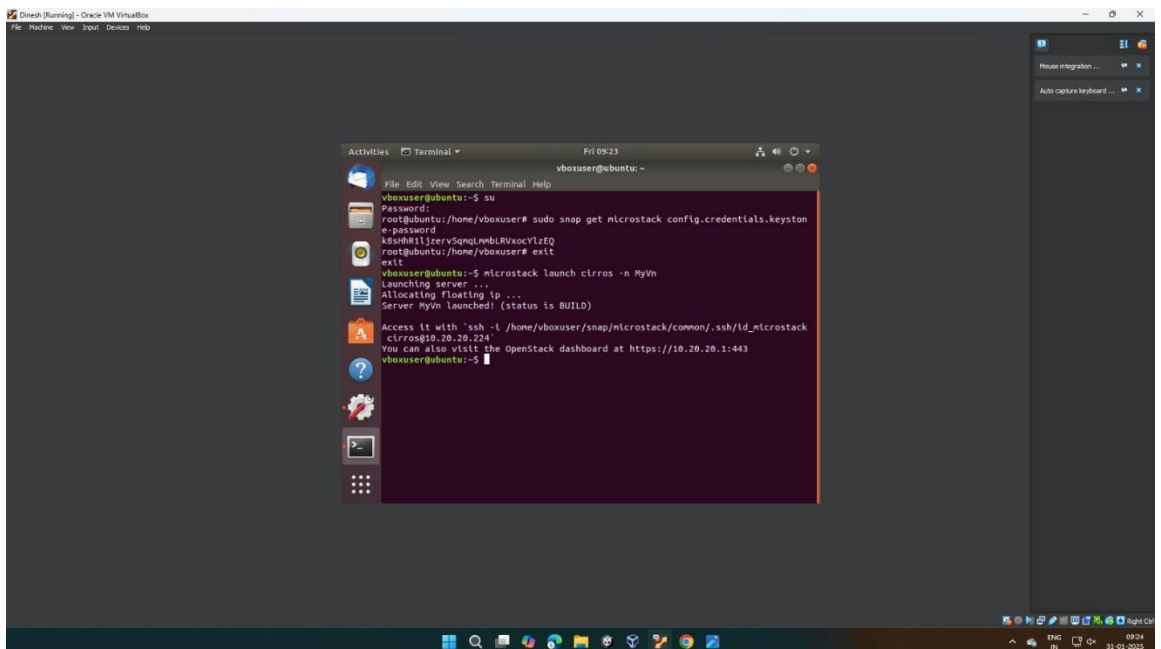

11. Configure the instance as follows:
  - Source: Select the Cirros image.
  - Flavor: Choose m1.tiny.
  - Networks: Select External.

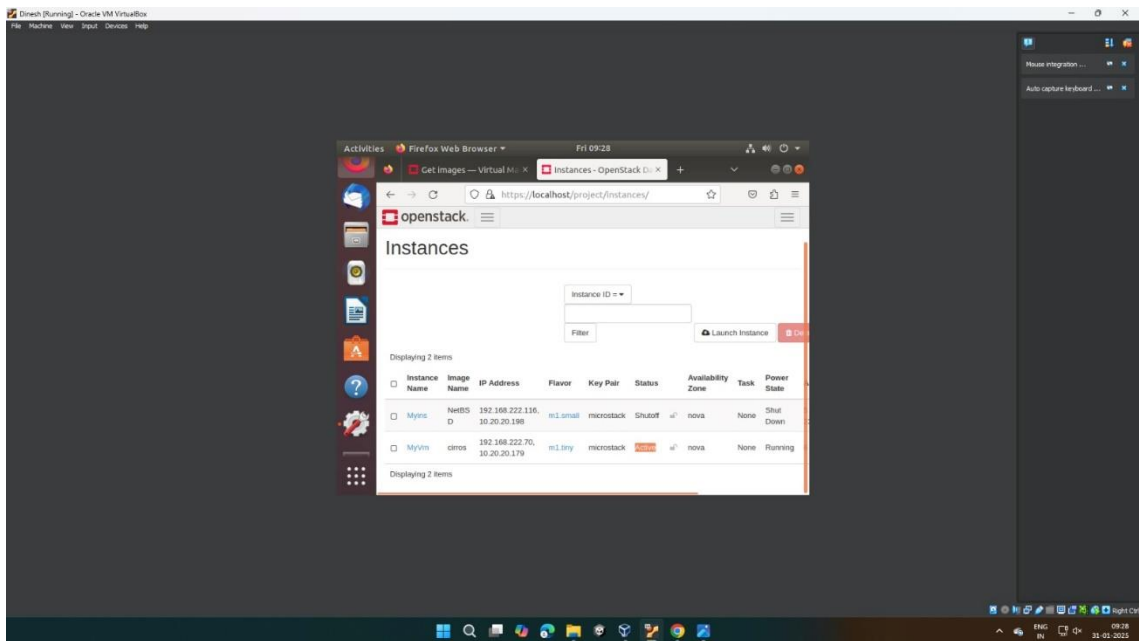

12. Proceed by clicking Next until the Launch Instance button is enabled, then click it.

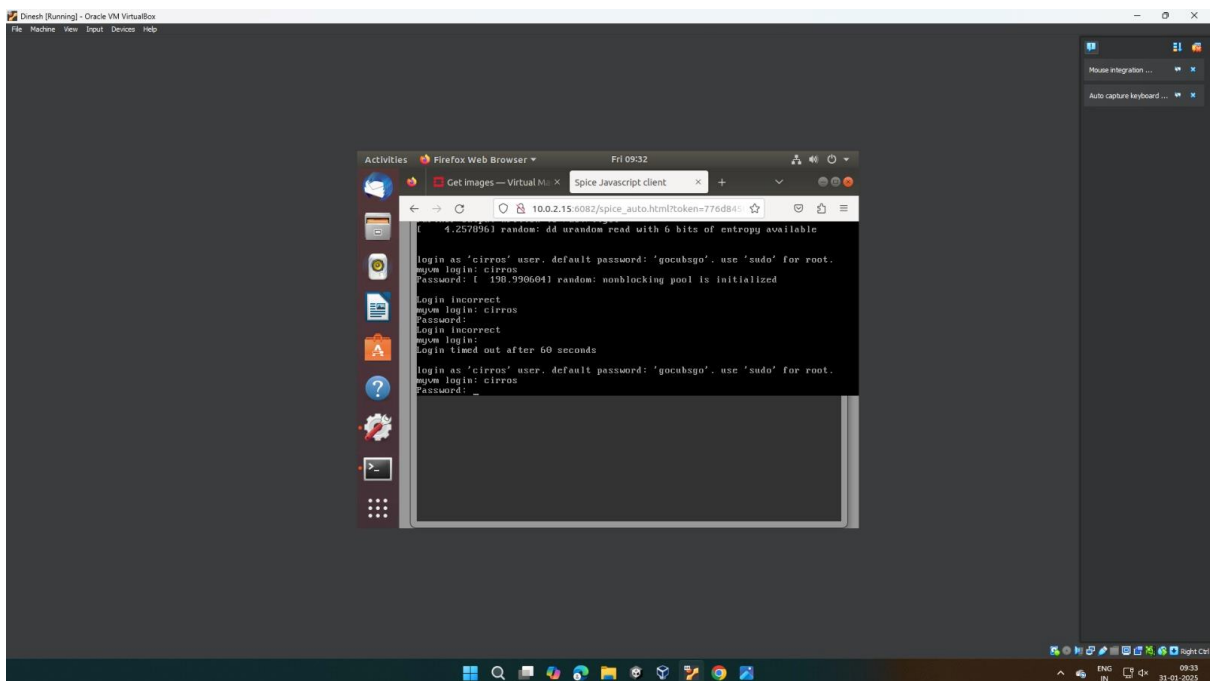

13. If the instance fails to launch via the dashboard, use the following terminal command:  
microstack launch cirros -n MyInstance

14. Refresh the Instances page to verify that the instance is running.

15. To confirm successful launch, access the Console and run basic commands.

---

## RESULT:

We have successfully installed and configured OpenStack on our virtual machine, setting up a private cloud.
